

AIRBAGS

Airbags are placed in the spaces between the products or pallets during loading. In this way, it supports the products, provides balance and prevents the products from falling over. Polywoven container airbags can withstand tons of pressure, are absolutely unaffected by water and moisture, and ensure that your cargo reaches its destination intact without being damaged.

ADVANTAGES

Recyclable

Constructed of separable polypropylene and polyethylene layers

Moisture Resistant

Naturally repels moisture; perfect for unpredictable weather conditions

AAR Verified

Thoroughly tested and verified by the Association of American Railroads
